                                                                                                                                                                                                                                                                             RESULT 9

US-09-061-709-4

Second of Application US/09061709B

Patent No. 6297364

GENERAL INFORMATION:

APPLICANT: Tone, Yao-Tseng

APPLICANT: Stockert, Blisabeth

APPLICANT: Stockert, Blisabeth

APPLICANT: APPLICANT: All

APPLICANT: Jager, Elke

APPLICANT: Muth, Alexander

APPLICANT: Muth, Alexander

APPLICANT: Muth, Alexander

APPLICANT: Muth, Alexander

TILE OF INVENTION: Isolated Nucleic Acid Molecules Encoding Cancer Associated

TILE OF INVENTION: Antigens Per Se, And Uses Thereof

TILE REPREBRICE: UND 5538

CURRENT APPLICATION NUMBER: US/09/061,709B

CURRENT FILING DATE: 1998-04-17

NUMBER OF SEQ ID NOS: 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1071

Sequence 175, Application US/09542615A

Patent No. 6518256

GENERAL INFORMATION:
APPLICANT: Wang, Tongtong
APPLICANT: Rangur, Chaitanya S.
APPLICANT: Hosken, Nancy A.
APPLICANT: Fanger, Gary R.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR THERAPY
TITLE OF INVENTION: COMPOUNDS OF LUNG CANCER
TITLE OF ILLING DATE: 21012.455C8
CURRENT APPLICATION NUMBER: US/09/542,615A
CURRENT APPLICATION NUMBER: US/09/542,615A
CURRENT PELING DATE: 2000-04-14
NUMBER OF SEQ ID NOS: 350
SOFTWARE: PastSEQ for Windows Version 3.0
SEQ ID NO 175

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
